Work Experience

MBRDI- Senior Consultant   *Feb 2020 - Till date*

Project Handled: -

Project 1: Product Database

Client: Mitsubishi Fuso Truck and Bus Corporation.

Role: Full stack Developer.

Environment: .Net Core, ReactJS, JavaScript, SQL, Azure.

Description:

The objective of this tool is to be the major source for product related information, supporting DTA employees' core tasks.

All product related information is uploaded by admin using excel files which is later processed and stored in SQL. APIs are built to fetch data and display as per the requirement.

Mintree Ltd.- Module Lead   *Oct 2015 – Jan 2020*

Project Handled: -

Project 1: Social-Konnect

Role: Module Lead/ Developer.

Team Size: 3

Environment: SharePoint Online, SPFx, ReactJS, JavaScript, MS Flow

Description:

   The objective of this module is to create a social collaborating platform for the users. It has different sub-modules like News, Events, Communities, Groups, Streams and Documents. Users can create event and upload documents whole organization level or at community (which they are part) level.

   SPFx with ReactJS was used to build this component. MS Flow was used to move documents to different document library based on permission.

Project 4: Anniversary Automation Tool

Role: Module Lead/Developer.

Team Size: 3

Environment: SharePoint 2013, AngularJS, Rest API, C#, WCF Service, HTML, CSS.

Description:

   The objective of this module is to create a portal were user can wish their colleagues on the day of their anniversary and person who has completed the anniversary can download all the wishes in the form of pdf at the end of the day.

   In this we used SQL table and SharePoint list to store data. Application is developed using C#, WCF Service, AngularJS and CSS. Console application was there to trigger anniversary mailers.

Project 3: Con-Track

Role: Developer.

Environment: SharePoint 2013, AngularJS, Rest API, C#, WCF Service, HTML, CSS.

Description:

The objective of this module is to act as a front-end platform for legal team in a way that all the Contract Approval requests should be captured using this tool and further moved to Icertis.

All the master and user data were stored in SQL database. Used stored procedures and functions to retrieve data from the tables and used service to fetch data to UI. Application is developed using C#, WCF Service, AngularJS and CSS. Used SharePoint list to store few master data and also SharePoint groups to authorize users. This application is combination of both server and client side.
